MANAV GAWAS

Applied AI Engineer | Forward Deployed Engineer (FDE)

9702582512 | gawasmanav469@gmail.com | manav@syncora.systems

LinkedIn | GitHub | Portfolio

Professional Profile

Applied AI and product engineer focused on turning ambiguous customer and business problems into working software. Builds AI-enabled products across LLM applications, agent workflows, RAG, real-time voice systems, backend integrations, and full-stack delivery — from solution design through implementation and iteration.

Technical Skills

AI & LLM Systems: LLM APIs, RAG, Vector Search, AI Agents, Tool Calling, Prompt / Context Engineering
Backend & Systems: Go, Node.js, REST APIs, WebSockets, Webhooks, PostgreSQL, Redis
Product Engineering: Next.js, React, TypeScript, Full-Stack Development, Rapid Prototyping, Debugging
Integrations & Automation: CRM Workflows, Third-Party Integrations, Conversational Workflows

Professional Experience

Syncora Systems — 2025 – Present

AI Engineer & Solutions Architect | syncora.systems

- Translate business requirements into AI-enabled product workflows, owning solution design, engineering, integrations, and iterative delivery.
- Built a real-time Voice AI platform for conversational workflows and CRM automation, including architecture and end-to-end implementation.
- Built a Real Estate AI Concierge connecting lead qualification, property discovery, live inventory, CRM synchronization, conversational engagement, and site-visit scheduling.
- Designed and shipped Aurelis, a digital clinic operating layer spanning patient experience, AI-assisted treatment discovery, clinic operations, booking, CRM, and clinical workflows.

Selected AI Products & Projects

Syncora Atlas — AI Infrastructure Operations Control Plane — In Development

Proposed stack: Go, Python, LangGraph, Temporal, PostgreSQL

- Designing an AI-assisted platform to investigate infrastructure incidents, correlate metrics, logs, and deployment evidence, identify probable root causes, and coordinate governed remediation.
- Defined a multi-agent architecture with evidence-backed outputs, durable workflows, deterministic policy checks, human approval, controlled execution, and recovery verification.

Aurelis — Digital Clinic Operating Layer — 2026

Next.js, PostgreSQL, AI / RAG, Cal.com

- Built an integrated clinic platform with an AI Concierge, Treatment Finder, and clinic knowledge base / RAG layer.
- Implemented CRM, appointments, follow-ups, notifications, and operational workflows; designed practitioner workflows for patient records, consent, treatment plans, and progress tracking.

Real Estate AI Concierge — 2025 – 2026

AI Agents, CRM Integrations, Conversational Workflows

- Connected lead qualification, property discovery, live inventory, CRM synchronization, conversational engagement, and site visits.

Go Duplex AI Bridge — 2026

Go, WebSockets, Real-Time Voice, LLM Infrastructure | GitHub

- Engineered a full-duplex bridge for bidirectional real-time voice streams between telephony infrastructure and LLM systems.

Hackathons & Research

DWLR System Solution — Smart India Hackathon — 2025

React, Node.js, Socket.IO, Python ML

- Built a real-time groundwater monitoring dashboard simulating IoT ingestion with live streaming, ML forecasting, and alerts.

Cybersecurity Risk Classification Model — 2024

Python, Scikit-learn, Pandas

- Built and tuned SVM and Random Forest models on a custom dataset to classify cybersecurity risk levels, achieving approximately 94% accuracy.

Education & Achievements

SVKM's Mithibai College — 2023 – 2026

B.Sc. Computer Science
Relevant Coursework: Data Structures, Algorithms, Cloud Computing, Artificial Intelligence

Athletics: State-Level 3rd Place in Hurdles and 4×100m Relay (2018); District-Level 1st Place for three consecutive years (2015–2019).
